

## - FADED OR STAINED PVDF ALUMINIUM

PVDF and Powder Coated aluminium often deteriorate by fading, losing their original colour due

to sun exposure and weathering condition.

Its porous surface also traps pollution, runoff and all types of stains.

RENUGLASS developed solutions to remove stubborn stains but also to protect aluminium from fast staining. After restoration work we are able to prevent staining for a minimum of 2 years.

### SOLUTION: RENU-ALU "P" + PROTEC-ALU

RENU-ALU "P" will remove stubborn stains from the anodised aluminium

PROTEC-ALU coating will prevent staining for a minimum period of 2 years
